1 Introduction

The 2022 TIGER Geodatabases are extracts of selected nation-based and state-based geographic and cartographic information from the U.S. Census Bureau's Master Address File/Topologically Integrated Geographic Encoding and Referencing (MAF/TIGER) system. The geodatabases include feature class layers of information for the fifty states, the District of Columbia (DC), Puerto Rico, and the Island areas (American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and the United States Virgin Islands). The geodatabases do not contain any sensitive data. The 2022 TIGER Geodatabases are designed for use with Esri's ArcGIS. However, other geographic Information system (GIS) software such as Quantum GIS (QGIS) also support the geodatabase format.

Please refer to the 2022 TIGER/Line Shapefile Technical Documentation for additional information including definitions and metadata.

Questions about these files please email Geo.geography@census.gov or call (301) 763-1128.
